MONITORING

## CHEAT SHEET

INFRASTRUCTURE

Setup monitoring of CPU, Memory, I/O, Network metrics. Choose a 10 or 30 sec sample interval.
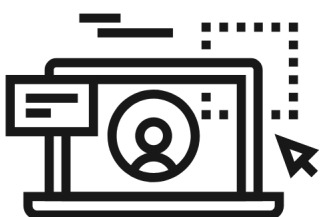

APM

Integrate an application performance monitoring solution. Collect all transactions. Enable horizontal and vertical analysis.
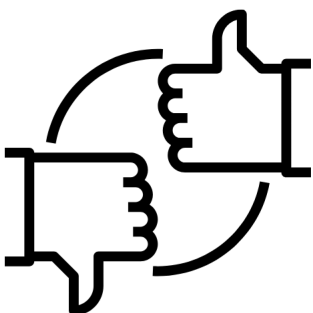

UEM

User experience monitoring of your business critical applications. Collect real user metrics. Measure response time as perceived by your users.

UPTIME

Automated simulation of important user interactions, set realistic thresholds, receive alerts and proactively solve issues prior they appear to your customer.

SHARE & REVIEW

Visualize health and performance metrics on dashboards. Review collected data regularly and share your findings with the organization.
